cubb

As our work becomes more mobile, so the places where we work and socialise become more diverse.

The office / the hotel / the airport lounge / the co-working space / the university campus / the train station increasingly merge and at times it's difficult to tell them apart.

Cubb is a concise range of contemporary chairs, stools and tables designed to work within these dynamic environments and has an expansive range of typologies **designed to meet the diverse specification requirements demanded of these new work and leisure settings.**

“

The workspace will be mobile and social in nature, so that communication moves beyond one-to-one to many-to-many to capture the power of social networking. Cisco

”

The chair is mounted on a choice of four bases. The ergonomically dimensioned and fully upholstered shell features a gently curved s-shape, which offers integrated lumbar support.

A choice of two arm configurations, a thin metal bar and an upholstered arm side pad are also available, together with a choice of upholstery options, which include a piping detail, two tone and quilted seats.

A concise range of contemporary chairs/stools/tables.

The Chair

Seat

The seat is constructed from a specifically contoured FSC Beech plywood veneered shell with an additional liner, which is covered with a CMHR foam seat and a Vitafoam V21 outer surface.

The organic shape of the seat provides a generous and ergonomic sit, which is refined with an integrated lumbar support and a gentle front edge waterfall. The seat shell is a two part inner and outer construction, which allows the chair to be upholstered in as wide a range of fabrics as possible.

Arms

Cubb offers two arm options, which allows the specifier to subtly change the character of the chair. An upholstered arm side pad and slim metal bar.

The fully upholstered arms are constructed from Birch plywood with CMHR foam and connected to the chair via high tensile strength steel J-bars. The two-part construction of the arm pad is consistent with the two-part seat shell.

The refined metal arms extend from the split between the seat inner and outer shell parts and are available either painted or chromed.

Base options

Wood Legs

The wooden base combines FSC solid oak legs with structural steel metalwork, creating a robust high performance construction. The natural aesthetic of the wood creates an inviting design, which is highly valued within more relaxed, and informal settings.

The solid Oak legs are available in a choice of finishes including natural European white oak or stained light, walnut and black.

The structural metal chassis adds a layer of playfulness and offers the specifier the opportunity to personalise the design with a choice of six carefully selected RAL colours. The visible fixings are designed to celebrate the honest construction - utilising the materials to their full potential.

Trestle Swivel Base

This four star base features an elegantly proportioned polished die-cast aluminum base and swivel support designed to offer a counterpoint aesthetic to the solid oak legs.

Wire Base

A visually light 12mm steel wire frame is also available on both the chair and the bar stool, which is offered either chromed or powder coated, with clear polycarbonate glides.

5 Star Base (light work chair)

The cast aluminum five star base with castors offers height adjustment and a subtle body weight mechanism. This added mobility and functionality is designed to allow Cubb to be specified as a light work chair, within diverse environments.

“As we move towards a more mobile work style, this mobility will drive down the space per person demand, whilst increasing the requirements for the right quality and type of space.”
