**Steelcase Series™ 1 with
CarbonNeutral® product certification**

Steelcase

Your Choice Leads Change

We took the same essential ergonomics and quality you expect from Steelcase Series 1 and made this chair even more sustainable.

Introducing Steelcase Series™ 1, certified as a CarbonNeutral® product. Carbon emissions are calculated, third-party verified and completely offset across every stage of this chair's lifecycle. Every purchase of this chair

supports trusted projects that slow climate change and create social benefits – including forest management, renewable energy, cleaner cooking and electric transportation.

Choose Steelcase Series 1 with CarbonNeutral product certification for a best-selling, best-in-class office chair to help achieve your emissions goals.

**STEELCASE
ESG COMMITMENTS**

Products and operations for a healthy planet

Opportunities for people and communities to thrive

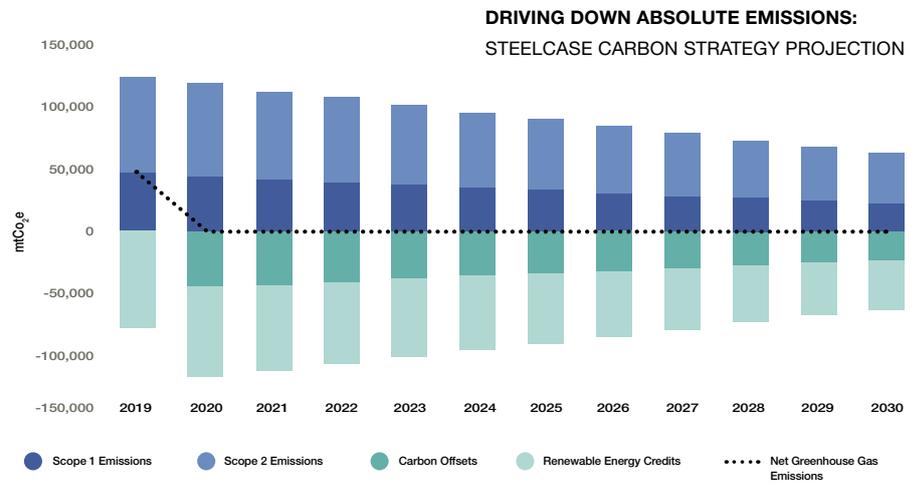

Culture of trust, inclusion and integrity

Business as a Force for Good

At Steelcase, we believe that business has a role to play in building a better future. We live this belief by conducting our business with integrity, setting bold goals and keeping our commitments toward a more sustainable, inclusive and equitable world.

Carbon Neutral Now

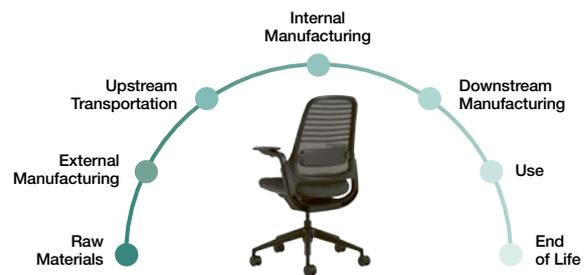

Through deep reductions in our own emissions and carbon offset investments, Steelcase is carbon neutral now and that's only the beginning. We are working toward science-based targets to reduce our absolute emissions by 50% by 2030. Offsets are an important way to take climate action now while we drive down emissions across our plants, processes and product portfolios.

Design for Sustainability

Did you know 80% of a product's ecological impact is determined during its design? That's why Steelcase products and operations are designed around a commitment to mitigate climate change, reinforced by sustainable practices across our value chain.

While it's common to report carbon impacts up to the point of purchase, for Steelcase Series 1 with CarbonNeutral product certification, Steelcase is offsetting the carbon dioxide equivalents emitted at every stage of this chair's lifespan, from raw materials to end of life.

Achieve Your Emissions Goals Now

In Steelcase Series 1 with CarbonNeutral product certification, you can count on a high-performance office chair that is carbon neutral now to help achieve your (Scope 3) climate emissions goals.

Certified by Climate Impact Partners

This chair is certified by Climate Impact Partners (A merger of ClimateCare & Natural Capital Partners), a global leader in voluntary climate action and founding member of the International Carbon Reduction and Offset Alliance (ICROA).

GREENHOUSE GAS PROTOCOL EMISSIONS CATEGORIES

Scope 1

Directly produced by your organization

Scope 2

Indirectly generated by use of electricity

Scope 3

Indirectly occurring through purchase, transportation, waste

Good for Planet, Good for People

The emissions of Steelcase Series 1 with CarbonNeutral product certification are completely offset by high-quality, verified global projects through Climate Impact Partners. Each purchase of this chair supports:

© Climate Impact Partners

Renewable Energy Portfolio recognizes that the world's energy needs keep growing and conventional energy generation is a leading source of greenhouse gas emissions. The projects in the portfolio advance innovation, infrastructure and the adoption of clean, affordable energy around the world.

© Climate Impact Partners

Darkwoods Forest Conservation protects 156,000 acres of Boreal forests in British Columbia, Canada, for biodiversity, research, sustainable harvesting and carbon sequestration.

© Climate Impact Partners

Efficient Cookstoves makes cleaner, more efficient and locally manufactured cookstoves more accessible to families in rural Kenya, where people typically cook over open fires or smoke-generating cookstoves. The efficient cookstoves reduce CO₂ emitted and indoor air pollution, which is a significant driver of health problems for women and children.
